Composition
Each gram of cream contains Clotrimazole USP 10 mg.

Description
Clotrimazole is a broad spectrum antifungal. It also exhibits activity against Trichomonas, Staphylococci, Streptococci and Bacteroides.

Indication and Usage
The confirmed indication for Triderm® include:
1. all dermatomycoses due to dermatophytes (e.g. Trichophyton species).
2. all dermatomycoses due to yeasts (Candida species).
3. dermatomycoses due to moulds and other fungi.
4. skin diseases showing superinfections with these fungi.
To the dermatomycoses listed under 1-4 belong for example, interdigital mycoses (e.g. athlete’s foot), paronychias (associated with nail mycoses), mycoses in skin folds, Candida vulvitis, Candida balanitis, Pityriasis versicolor, erythrasma.

Dosage and Administration
Apply sparingly to the affected areas 2-3 times daily and rub in gently. Triderm® should be applied to clean and dry skin.

Duration of Treatment
Dermatomycoses : 3-4 weeks
Candida vulvitis and Candida balanitis : 1-2 weeks
Erythrasma and Pityriasis versicolor : 3 weeks
In fungal infection of the feet, to prevent relapse, treatment should be continued for about 2 weeks beyond the disappearance of all signs of disease.

Contraindication
Hypersensitivity to clotrimazole.

Side Effects
When applied topically, Clotrimazole cream is well tolerated. With external application systemic effects are not observed. Local irritation, erythema, pruritus, urticaria or burning sensation may occur in a very few cases but these symptoms are not considered harmful.

Drug Interaction
No information is available.

Use In Pregnancy
It is recommended that Clotrimazole should be used in pregnancy only when considered necessary by the physician.

Storage
Store between 15° and 30°C. Protect from light. Do not freeze.
